

## **MDD / MDD TR Release R7.25 Service Talk**

MDD and MDD TR Release R7.25 will be piloted from 10/26 to 11/06 and deployed nationwide on 11/09 to all remaining sites. New features introduced in the release include:

- **Apply regular scan barcode workflow into Dynamic Delivery**
- **Change of Address – MLNA (Moved Left No Address)**
- **Modify the Uncommitted Data Warning Message from 20 minute to 5 minute**
- **Logic update in supporting Geo flag population in MED106**
- **Enable Geo Alert in Dynamic Delivery**
- **Package Look Ahead screen update**
- **Add additional Vibration for hearing-impaired carriers**
- **Add new Global Direct Entry STCs**

# Dynamic Delivery Regular Scan Workflow

## Background

Dynamic Delivery workflow needs to be modified to flow similarly as Regular Scan Barcode mode.

## Changes on MDD

MDD application is modified to offer the same confirmation events and workflow as the regular Scan Barcode for Dynamic Delivery.

Coloring stops and packages also added:

Coloring On Stop level:

If a stop has multi packages and not all of them are scanned, then whole stop stays **Blue**.

A stop turns **Green** if any single package at the stop is scanned and a confirmation event is applied.

Coloring for Packages inside stop:

Package delivered with option 1. Delivered = **Green**;

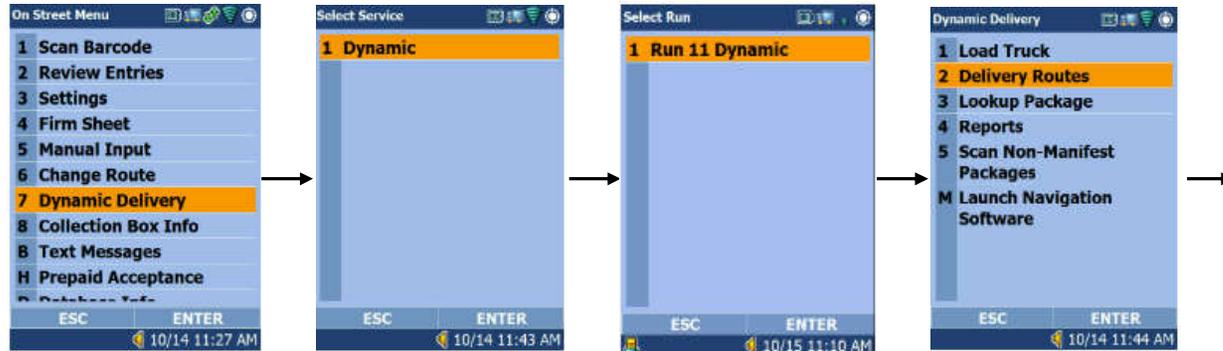

Delivered with any other option: (2. Attempted; or 3. Return to Sender..., or 4. Other) = **Yellow**;

Not scanned = **Blue**

1<sup>st</sup> package was delivered and colored in green (not shown here);  
 2<sup>d</sup> and 3<sup>d</sup> packages are colored in Yellow (event selected was not Delivery)  
 Scan 4<sup>th</sup> and 5<sup>th</sup> packages package in blue and press ENTER

4<sup>th</sup> and 5<sup>th</sup> scanned packages changed color to green.  
 Press ENTER

Confirmation Events list present with 4 options;  
 Select 4. Other, press ENTER

Full list of Other events present  
 Select any event, Press ENTER

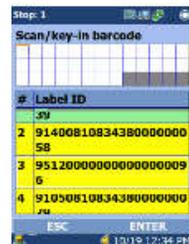

Information recorded

Coloring On Stop level:  
 When all packages for the stop were scanned and processed, regardless of Delivery events selected, Stop changes color to Green

1<sup>st</sup> stop turned color to Green, as all packages were scanned/delivered

Colors for the packages will remain the same color as before (depending on selected delivery events)

UNITED STATES  
POSTAL SERVICE®

## **Change of Address – MLNA(Moved Left No Address)**

### **Background**

Currently carriers manually complete the 3575Z form when customers have moved and have not filed a Change-of-Address (COA).

### **Changes on MDD**

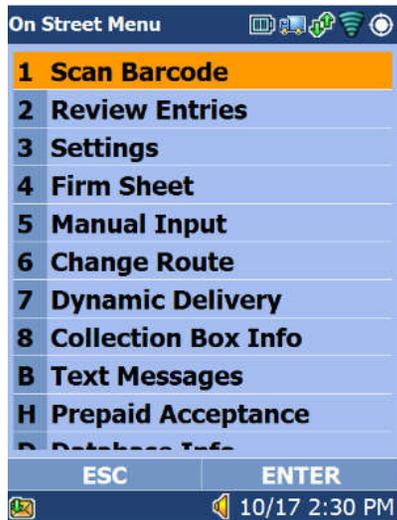

Modify the MDD to allow carriers to capture information on addresses where a COA has not been completed by scanning an 11 digit barcode on a mail piece via the MLNA workflow. And also allow carrier to manually enter the address information if the 11 digit barcode is not available.

After the COA data is collected, MDD uploads the data to AWS(Amazon Cloud Service) then to NCSC ( National Customer Service Center) for processing.

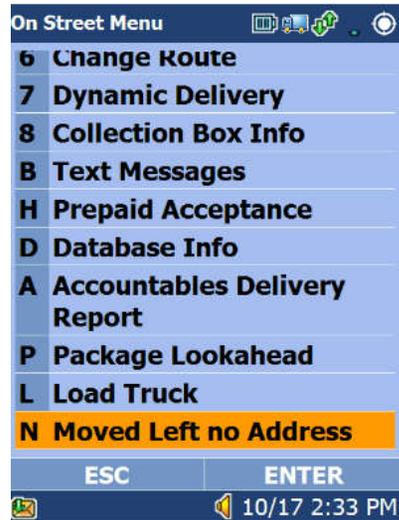

UNITED STATES  
POSTAL SERVICE®

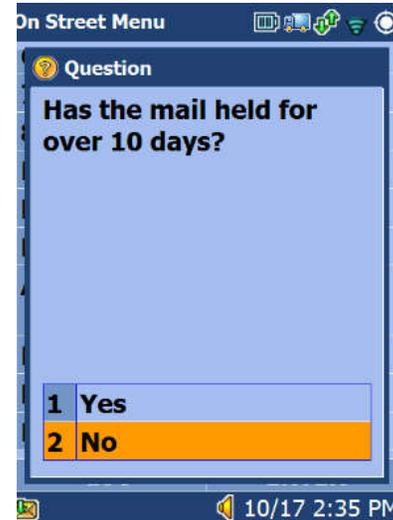

## Change of Address – MLNA (Moved Left No Address)

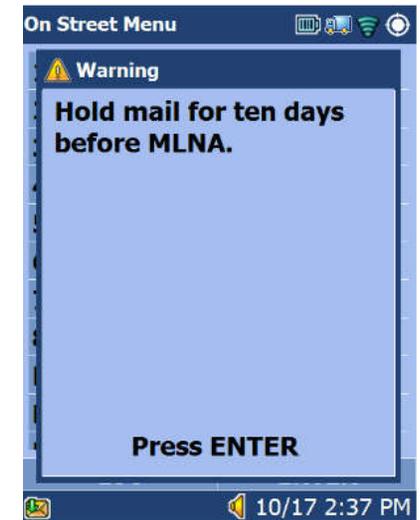

1. Complete the log in process > carrier is On Street menu.

2. Scroll down to menu option “Moved Left No Address” or press hot key N.

3. A pop up message is presented > carrier confirms if the mail has been held for 10 days.

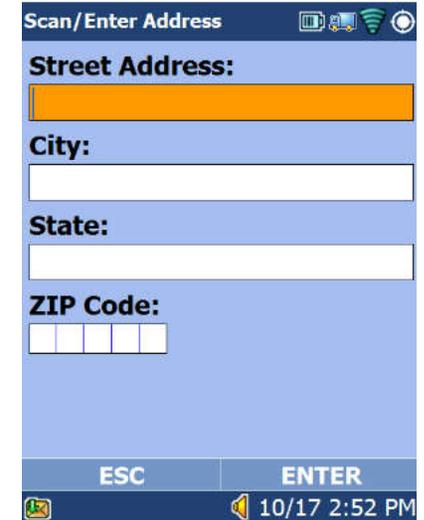

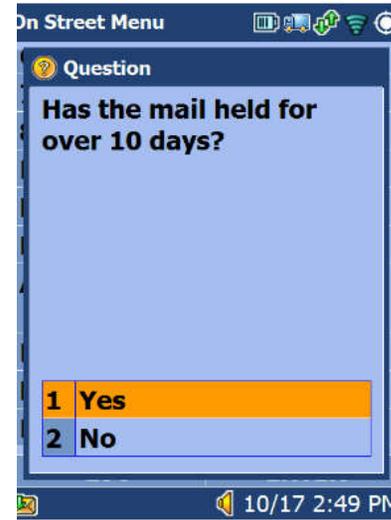

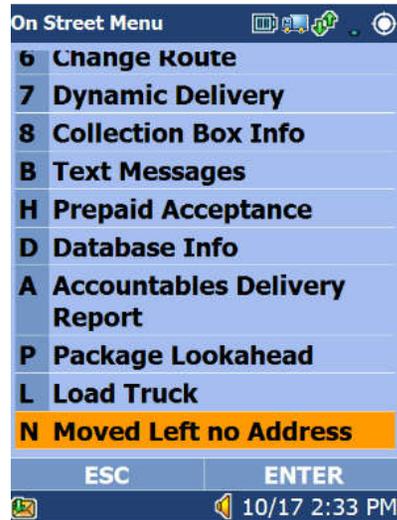

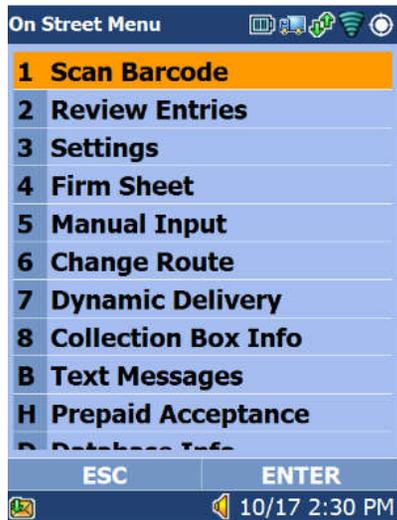

4. When carrier selects NO. Error message is presented to carrier. Carrier gets returned to On street menu. Screenshot 1 here.

UNITED STATES  
POSTAL SERVICE®

## Change of Address – MLNA (Moved Left No Address)

1. Complete the log in process > carrier is On Street menu.

2. Scroll down to menu option "Moved Left No Address" or press hot key N.

3. A pop up message is presented > carrier confirms if the mail has been held for 10 days.

4. When carrier selects Yes. Scan/Enter address screen is presented.

Scan/Enter Address

Error

No address information found for this ZIP code!

10/17 4:32 PM

2. If no match with 11 digit Zip, then the above screen is presented and scanner returns back to previous screen in screenshot 1

# Uncommitted Data Warning Message

## Background

Currently the Uncommitted Data Warning Message appears after 20 minutes idle from the last scan on the scanner.

## Changes on MDD

MDD application is modified to display the Uncommitted Data Warning Message after 5 minute idle from the last scan. User can select “Continue” or “Discard” at the prompt.

- Continue: All labels scanned are kept and user can continue scanning afterwards
- Discard: All labels scanned are erased and user need to rescan the barcodes

The warning message is displayed regardless the motion and speed of the scanner.

## Support GEO Flag Population in MED106

### Background

Further updating MDD logic in populating Geo flag in MED 106 to support PTR Geo certification process.

### Changes on MDD

MDD application is modified to resolve cases listed below when Geo flag is not recorded in the MED106 but the delivery location address information is available on the scanner:

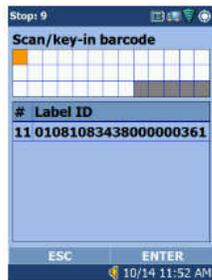

- When login route ID is different from the route ID in TRP package manifest as a result of incorrect login or pivot assignment for regular deliveries. The address lookup now is not limited to the login route anymore.
- When delivering packages in MDD Dynamic Delivery application, as a result of lacking DELSYSID in the DRT package manifest. The DELSYSID is now included in the DRT package file and MDD application is updated to apply to lookup logic for Dynamic deliveries based on DELSYSIDs.
- When package manifest file was missed in downloading as a result of earlier DEPART2ROUTE scan for parcel routes. The DEPART2ROUTE scan is now removed as TRP manifest file download cutoff. The cutoff time is limited to 11:00am(Local time) only.
- When no GPS at the time of scanning use the GPS when selecting Confirmation event

## Single Label Transaction in Dynamic Delivery

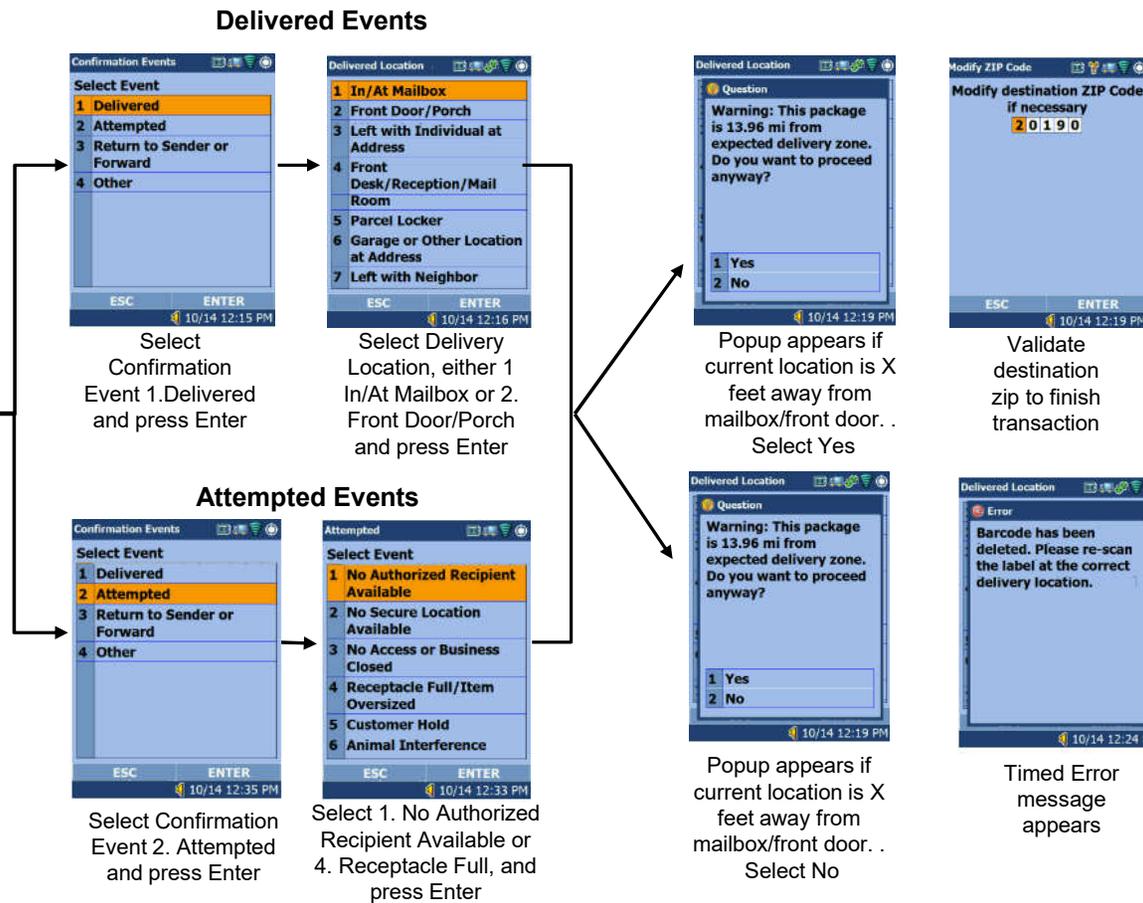

## Single Label Transaction in Dynamic Delivery

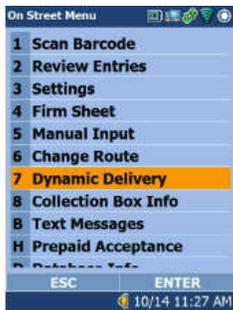

Note: Geo Alert audit applies to the following events:  
 Delivered > In/At Mailbox  
 Delivered > Front Door/Porch  
 Attempted > No Authorized Recipient Available  
 Attempted > Receptacle Full/Item Oversized  
 All above events will follow the same workflow after selecting Confirmation Event, as presented on this slide

# Vibration to Support Hearing-impaired Carriers

## Background

In order to support hearing-impaired carriers there is a need to allow the devices to vibrate when normally a Text To Speech (TTS) is provided

## Changes on MDD

Modify the MDD to vibrate for the following messages:

Interactive Messages – User needs to react by pressing Enter.

- Warning: Data Entry Not Complete
- Battery Warning: Battery is critical low. Please change battery or place MDD into cradle.

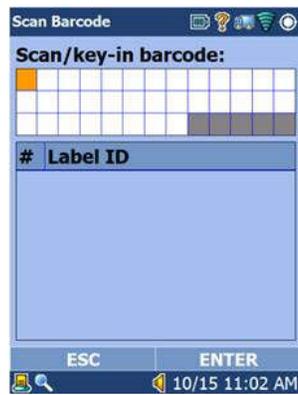

Question Message – User needs to make a selection to respond.

- You Have {0} unread alerts. Do you want to....?
- Warning: Data Not Saved

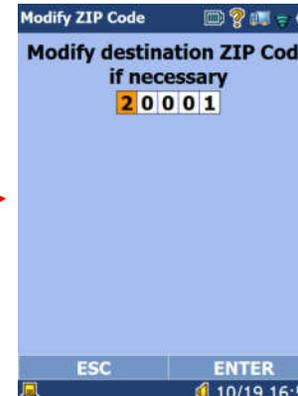

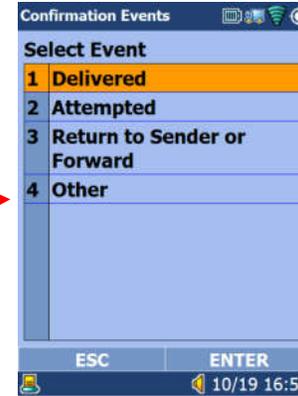

# Warning: Data Not Saved

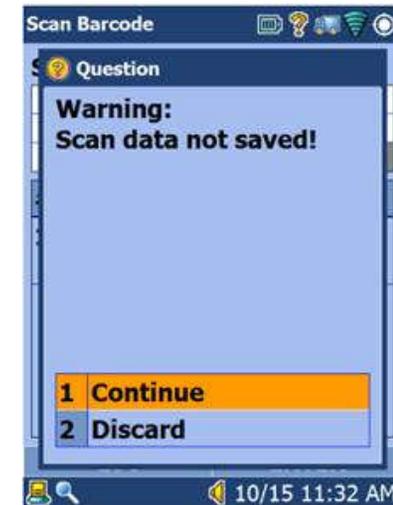

Select Scan Barcode  
and Press Enter

Scan a Barcode

After scanning barcodes, if users stay on these screens for longer than 5 mins, a warning message will display

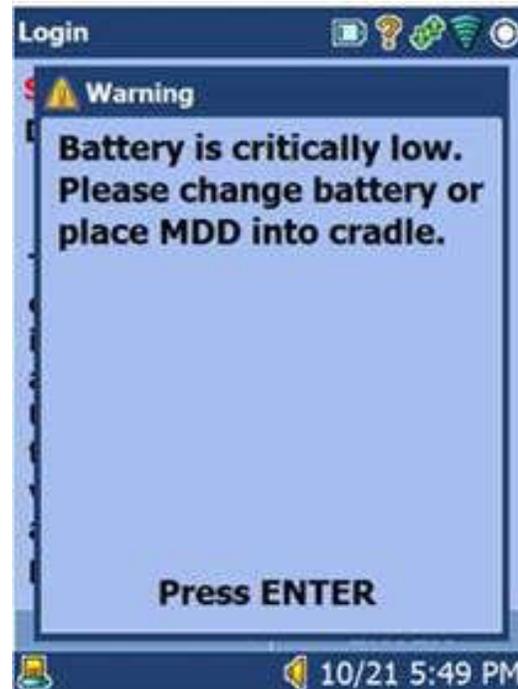

**NEW**

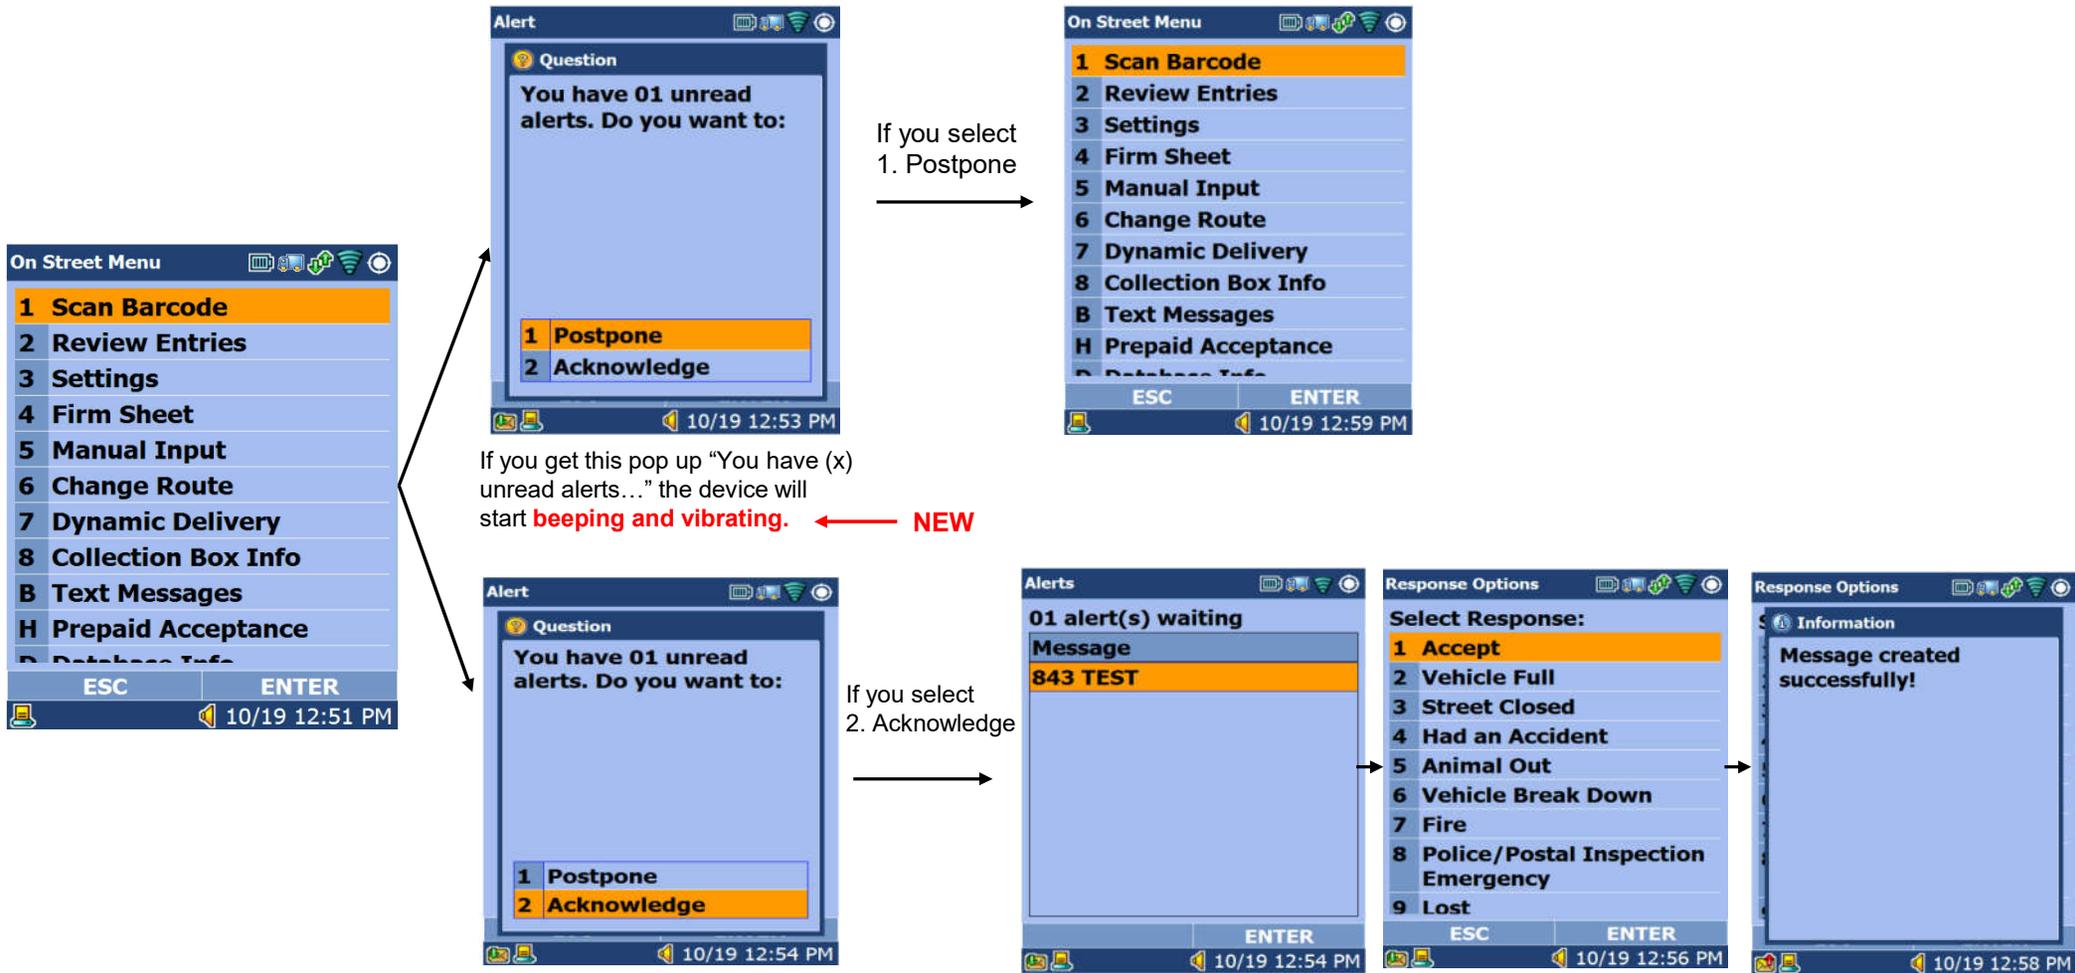

Warning Message is displayed after 5 minutes with **beeping and vibration** – Select Continue to keep label or Discard to discard label.

## Warning: Battery Critical Low

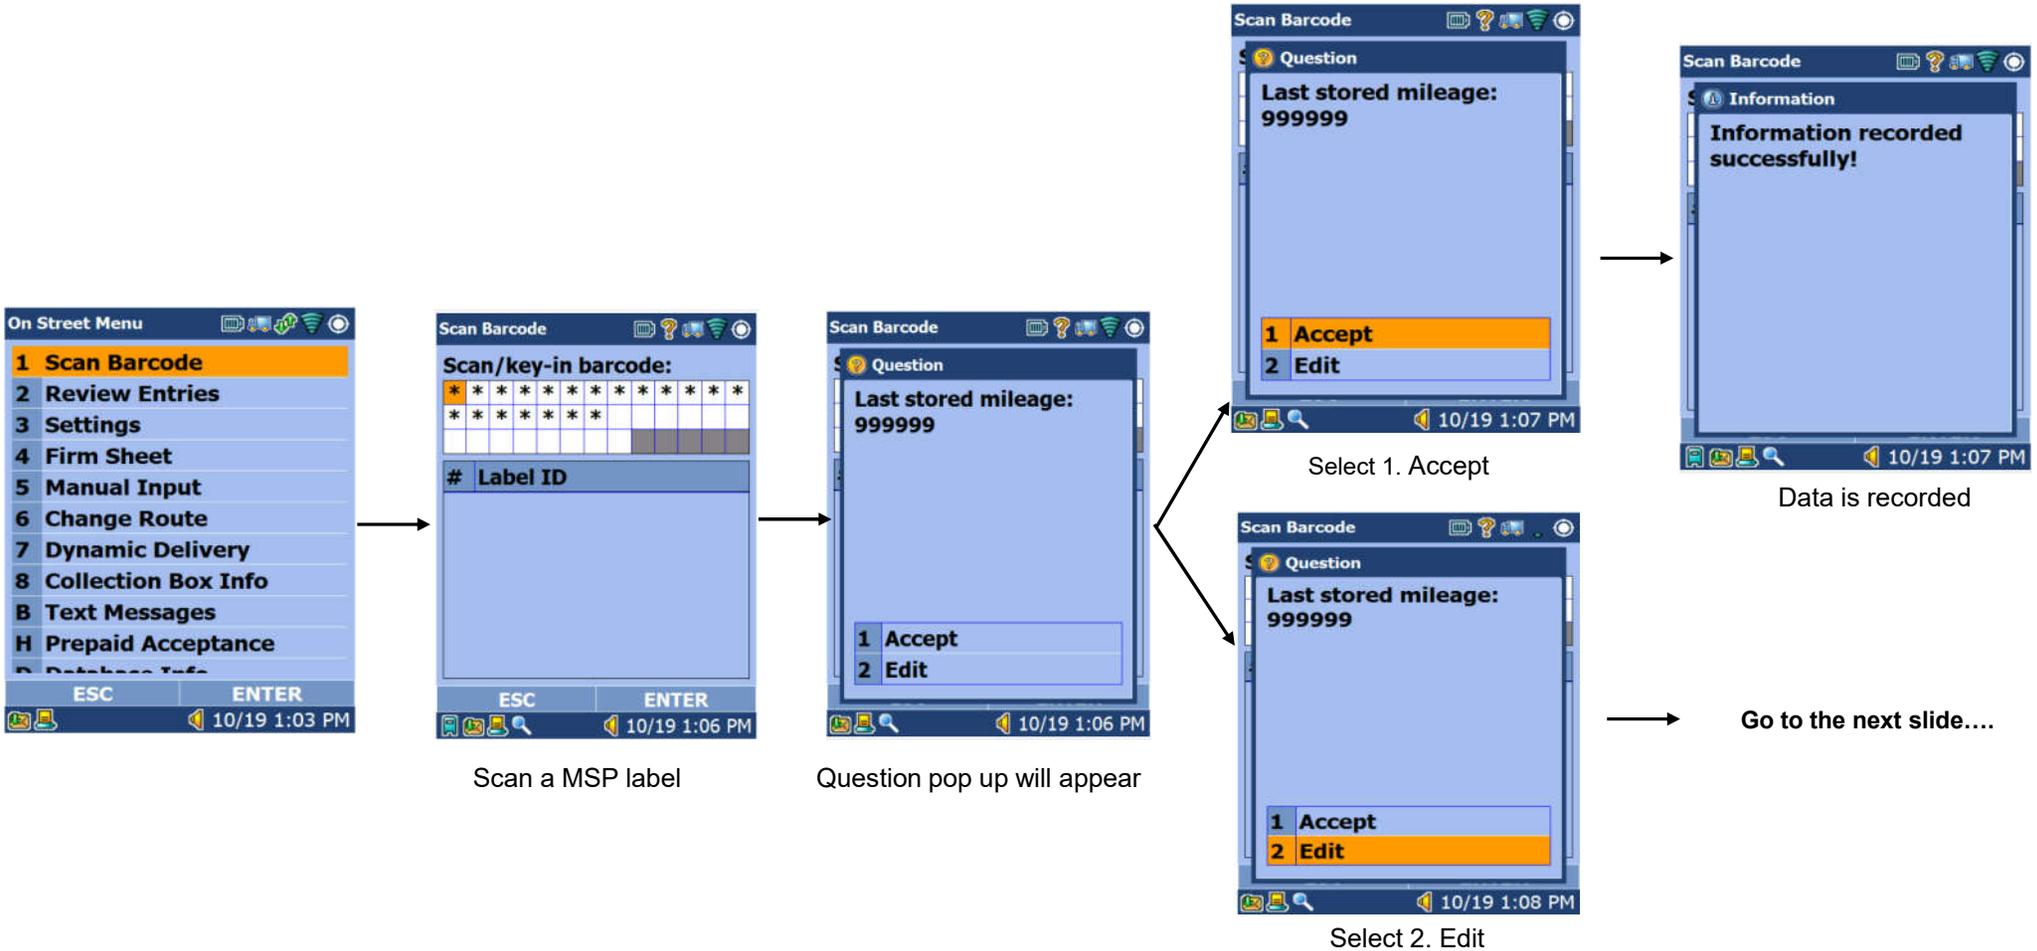

When Battery reaching critical low, less than 10% of remaining capacity, MDD pops up warning along with vibration. This popup can be displayed at any workflow inside the MDD application.

# You Have {0} unread alerts. Do you want to....?

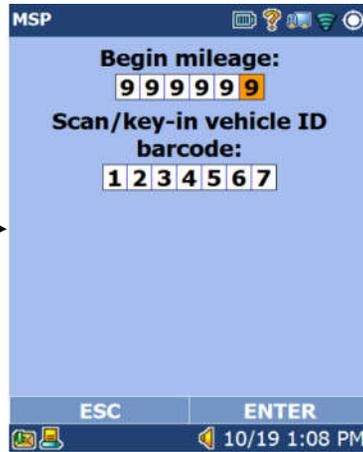

# Data Entry Not Complete

# Warning: Data Entry Not Complete

Select 2. Edit

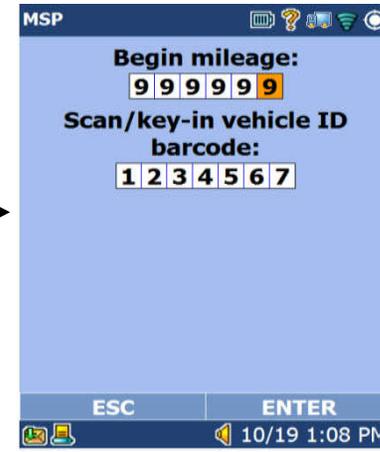

Enter Begin mileage and vehicle ID then stay on the screen for 1 minute.

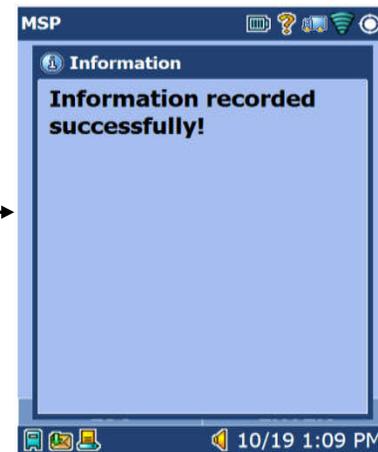

The "Data entry not complete!" warning message will appear and the device will start **beeping and vibrating.** ← NEW

Select ENTER to go back to MSP screen.

Enter Begin mileage and vehicle ID then Select ENTER

Data saved successfully!
